Dear Airbnb Team,

Looking for a web developer who knows React, Redux, and Rails and is equally passionate about elegant, robust CSS? I'd love to help.

I'm Matt, a frontend engineer with deep interest in proficient frontend design along with strong fundamental programming skills in JavaScript and Ruby.

Why does Airbnb appeal to me? I built my [full-stack project](#) as a clone of Airbnb because I thoroughly loved the structure and beautiful layout of Airbnb. I was surprised to discover how the designers and engineers crafted the search map and components on the front-page of the website, and I tried hard to imitate this in my project.

I chose to apply to Airbnb because I want to work at a company that values and respects engineering aesthetics on a massive scale. So many people all around the world benefit from the engineering and design at Airbnb, and it would be amazing to help contribute to this movement. My professional interest is becoming the best frontend developer, with an emphasis on advanced CSS principles.

On my spare time, I enjoy being a "CSS detective" and investigating how different websites operate their layout. You can see more of what I'm learning at [my blog](#).

I want to thank you for taking the time to read my application, and I look forward to hearing back.

Sincerely,

Matt L. Wong
